### About:

Frontwalker is a leading IT Services Company which provides a complete IT software development service for a wide range of public and private sector clients.

### Business Need:

Ability to make a document repository available to everyone in the company who are all using a mix of iPads, MacBooks and Windows laptops.

### Benefits of LiveCode:

Using LiveCode enabled this important app to be developed quickly and efficiently, its cross platform capabilities ensured that the application was available to everyone as soon as it was ready. This saved many man months of development time and cost.

## Cross Platform & Cloud Document and Records Management System

### Introduction

Frontwalker was founded in 1996 and has grown to become one of Sweden's leading IT consulting firms, working with large public and private sector customers. Frontwalker seek to be a pioneer in both name and deed, their guiding principle is that responsible development will permeate everything that it does to ensure the best long term interest for their clients and community.

Frontwalker have staff located across Sweden and therefore it is essential that they all have access to the company Document Management System no matter what device they are using to access it.

### Frontwalker's, Mats Åström said

Mutual NDA agreements are often a part of our consultancy assignments, especially when the assignment requires that we take part of our customer business data and documentation. These documents, as well as documents produced within the project need be shared among project members. To make sure that all project documents are at all times available to authorized project members we needed some kind of cloud solution and we would have had quite a few of them to choose from had it not been for the NDA we just signed.

Summary Even though Cloud Service Providers ensure encrypted network traffic/data storage, the actual server storing the information might very well reside in a country whose legislation we know little or nothing about. We therefore developed a cloud solution for our consultancy firm using LiveCode & LiveCode Server which runs on our own server.

On the client side there is a MacOS X desktop app, a Windows desktop app and an iPad app. The apps upload and sync documents using SSL and iRev-scripted web services to access the server document repository and database. Hence, all customer and project documents are in a secure place and available to all concerned

"LiveCode was our natural choice, we were able to develop client side apps for MacOS, Windows and iOS as well as server side web services using the same code base. We would not have considered developing our system had it not been for the multi-platform capabilities in LiveCode, it would simply have been too costly".

**Mats Åström Frontwalker AB**

## About RunRev

Founded in 1997, RunRev is a technology company committed to making scalable software development fun, easy and accessible to everyone. To achieve this RunRev has created LiveCode.

## About LiveCode

LiveCode is an award winning, high level, cross platform, integrated development environment. Its compile free work flow and highly efficient single code base enables Apps to be developed on Windows, Mac and Linux and deployed on all popular platforms including Mobile, Desktop, Cloud and Server. LiveCode is used around the world by organizations of all sizes to solve real world business problems.

**Today millions of people use Apps built using LiveCode.**
